

# REAL WORLD TESTING PLAN 2023

## GENERAL INFORMATION

Plan Report ID Number: [For ONC-Authorized Certification Body use only] Developer

Name: Health Catalyst

Product Name(s): Medicity Connect Clinical Messaging

Version Number(s): 2.9

Certified Health IT Product List (CHPL) Product Number(s): 15.04.04.3034.Medi.27.01.0.190613

Developer Real World Testing Plan Page URL: <https://www.healthcatalyst.com/interoperability-certification/#real-world-testing-plan>

## JUSTIFICATION FOR REAL WORLD TESTING APPROACH

*Provide an explanation for the overall approach to Real World Testing, including an outline of the approach and how data will be used to demonstrate successful Real World Testing.<sup>i</sup>*

*All measures should reasonably align with the elements within a Real World Testing plan, the scope of the certification, the types of settings in which the certified health IT is marketed, and other factors relevant to the implementation of the certified Health IT Module(s). The justification should reflect how each element within the plan is relevant to the developer's overall strategy for meeting the Real World Testing Condition and Maintenance of Certification requirements.*

*Note: A single Real World Testing plan may address multiple products and certification criteria for multiple care settings.*

The Health Catalyst (formerly Medicity) Clinical Connect Messaging product provides secure email exchange via the Direct standard. While it may be utilized in various health care settings, the functionality remains the same across any environment and is marketed to hospital settings. Criteria to be tested: 170.315 (h)(2): Direct Project, Edge Protocol, and XDR/XDM.

## STANDARDS UPDATES (INCLUDING STANDARDS VERSION ADVANCEMENT PROCESS (SVAP) AND UNITED STATES CORE DATA FOR INTEROPERABILITY (USCDI))

*Both required and voluntary standards updates must be addressed in the Real World Testing plan. Real World Testing plans must include all certified health IT updated to newer versions of standards prior to August 31 of the year in which the updates were made.*

Describe approach(es) for demonstrating conformance to all certification requirements using each standard to which the health IT is certified. List each version of a given standard separately. For each version of a standard submit the following:

- ✓ Identify standard versions
- ✓ Indicate what certification criteria in which product(s) has been updated
- ✓ If reporting for multiple products, identify the certification criteria that were affected by the update for each of the associated products
- ✓ CHPL Product Number for each Health IT Module
- ✓ Method used for standard update (e.g., SVAP)
- ✓ Date notification sent to ONC-ACB
- ✓ If SVAP, date notification sent to customers
- ✓ Measure used to demonstrate conformance with updated standard(s)
- ✓ Which certification criteria were updated to USCDI and/or to which version of USCDI was the certification criteria updated?

<b>Standard (and version)</b>	N/A
<b>Updated certification criteria and associated product</b>	N/A
<b>CHPL Product Number</b>	N/A
<b>Method used for standard update</b>	N/A
<b>Date of ONC ACB notification</b>	N/A
<b>Date of customer notification (SVAP only)</b>	N/A
<b>Conformance measure</b>	N/A
<b>USCDI updated certification criteria (and USCDI version)</b>	N/A

## MEASURES USED IN OVERALL APPROACH

Each plan must include at least one measurement/metric that addresses each applicable certification criterion in the Health IT Module’s scope of certification. Describe the method for measuring how the approach(es) chosen meet the intent and purpose of Real World Testing.

For each measurement/metric, describe the elements below:

- ✓ Description of the measurement/metric
- ✓ Associated certification criteria
- ✓ Justification for selected measurement/metric
- ✓ Care setting(s) that is addressed
- ✓ Expected outcomes

**Description of Measurement/Metric**

*Describe the measure(s) that will be used to support the overall approach to Real World Testing.*

Measurement/Metric	Description
Electronic Exchange	The metric used to support this measure is the successful transmission and receipt of simulated patient information via the Direct protocol.

**Associated Certification Criteria**

*List certification criteria associated with the measure and if updated to the 2015 Edition Cures Update criteria. If conformance to the criteria depends on any Relied Upon Software, this should be noted in your Real World Testing plan for any metrics that would involve use of that software in testing.*

Measurement/Metric	Associated Certification Criteria	Relied Upon Software (if applicable)
Electronic Exchange	170.315 (h)(2): Direct Project, Edge Protocol, and XDR/XDM	

**Justification for Selected Measurement/Metric**

*Provide an explanation for the measurement/metric selected to conduct Real World Testing.*

Measurement/Metric	Justification
Electronic Exchange	The successful transmission and receipt of messages is the desired result of HISP processing for all care settings.

**Care Setting(s)**

*The expectation is that a developer’s Real World Testing plan will address each type of clinical setting in which their certified health IT is marketed. Health IT developers are not required to test their certified health IT in every setting in which it is marketed for use. Developers should address their choice of care and/or practice settings to test and provide a justification for the chosen approach.*

*Note: Health IT developers may bundle products by care setting, criteria, etc. and design one plan to address each, or they may submit any combination of multiple plans that collectively address their products and the care settings in which they are marketed*

*List each care setting which is covered by the measure and an explanation for why it is included.*

Care Setting	Justification
Hospital	Health Catalyst HISP clients are typically HIE or enterprise health systems comprised primarily of hospitals. Since a hospital represents the type of care setting where the HISP product is ultimately used, that is where testing will take place.

**Expected Outcomes**

*Health IT developers should detail how the approaches chosen will successfully demonstrate that the certified health IT:*

- 1) is compliant with the certification criteria, including the required technical standards and vocabulary codes sets;
- 2) is exchanging electronic health information (EHI) in the care and practice settings for which it is marketed for use; and/or,
- 3) EHI is received by and used in the certified health IT.

(from 85 FR 25766)

*Not all of the expected outcomes listed above will be applicable to every certified Health IT Module, and health IT developers may add an additional description of how their measurement approach best addresses the ongoing interoperability functionality of their product(s). Health IT developers could also detail outcomes that should not result from their measurement approach if that better describes their efforts.*

*Within this section, health IT developers should also describe how the specific data collected from their Real World Testing measures demonstrate expected results. Expected outcomes and specific measures*

do not necessarily have to include performance targets or benchmarks, but health IT developers should provide context for why specific measures were selected and how the metrics demonstrate individual criterion functionality, EHI exchange, and/or use of EHI within certified health IT, as appropriate.

Measurement/Metric	Expected Outcomes
<b>Successful transmission of EHI via two messages</b>	Two secure emails will be sent to the recipient endpoint. One message will have an attachment and one will not. The desired outcome will be that two messages will be successfully transmitted, and the appropriate Direct responses will be received and captured for reporting purposes to show that the application is compliant with 170.315 (h)(2).
<b>Successful receipt of two EHI messages</b>	Two secure emails will be received and processed by the recipient partner in testing. We will capture the Direct Message replies to both messages. The anticipated outcome is that the data received will be identical to the data transmitted in the original message and that the application is compliant with 170.315 (h)(2).

### SCHEDULE OF KEY MILESTONES

Include steps within the Real World Testing plan that establish milestones within the process. Include details on how and when the developer will implement measures and collect data. Key milestones should be relevant and directly related to expected outcomes discussed in the next section.

For each key milestone, describe when Real World Testing will begin in specific care settings and the date/timeframe during which data will be collected.

Key Milestone	Care Setting	Date/Timeframe
<b>Submit RWT plan to Drummond</b>	Hospital	11/15/2022
<b>Identify Real World Testing Partner</b>	Hospital	Q1/2023
Key Milestone	Care Setting	Date/Timeframe
<b>Perform Real World Testing</b>	Hospital	Q2-Q3/2023
<b>Submit 2023 RWT plan to Drummond</b>	Hospital	11/15/2023
<b>Analysis and report creation for 2022 testing</b>	<b>Hospital</b>	<b>1/15/2024</b>

## ATTESTATION

*The Real World Testing plan must include the following attestation signed by the health IT developer authorized representative.*

*Note: The plan must be approved by a health IT developer authorized representative capable of binding the health IT developer for execution of the plan and include the representative's contact information.<sup>ii</sup>*

This Real World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings. All information in this plan is up to date and fully addresses the health IT developer's Real World Testing requirements.
