

# How Augmented Intelligence in Healthcare Facilitates Successful Enterprise-Wide Decision-Making

When asked what issues keep them up at night in 2023, over 61% of healthcare leaders said labor, 55% said inflation, and 39% said supply chain expenses. Clearly, health systems need innovative ways to address today's revenue, cost, and quality challenges. By using augmented intelligence (AI) to make important decisions across the enterprise, leaders can position their organizations strategically, achieve transformation, and help ensure long-term success.

## Executive Decisions

By leveraging AI with data and analytics, executives can make better decisions regarding where to shift care delivery models or grow service lines, when to shutter or consolidate underutilized facilities, and more.

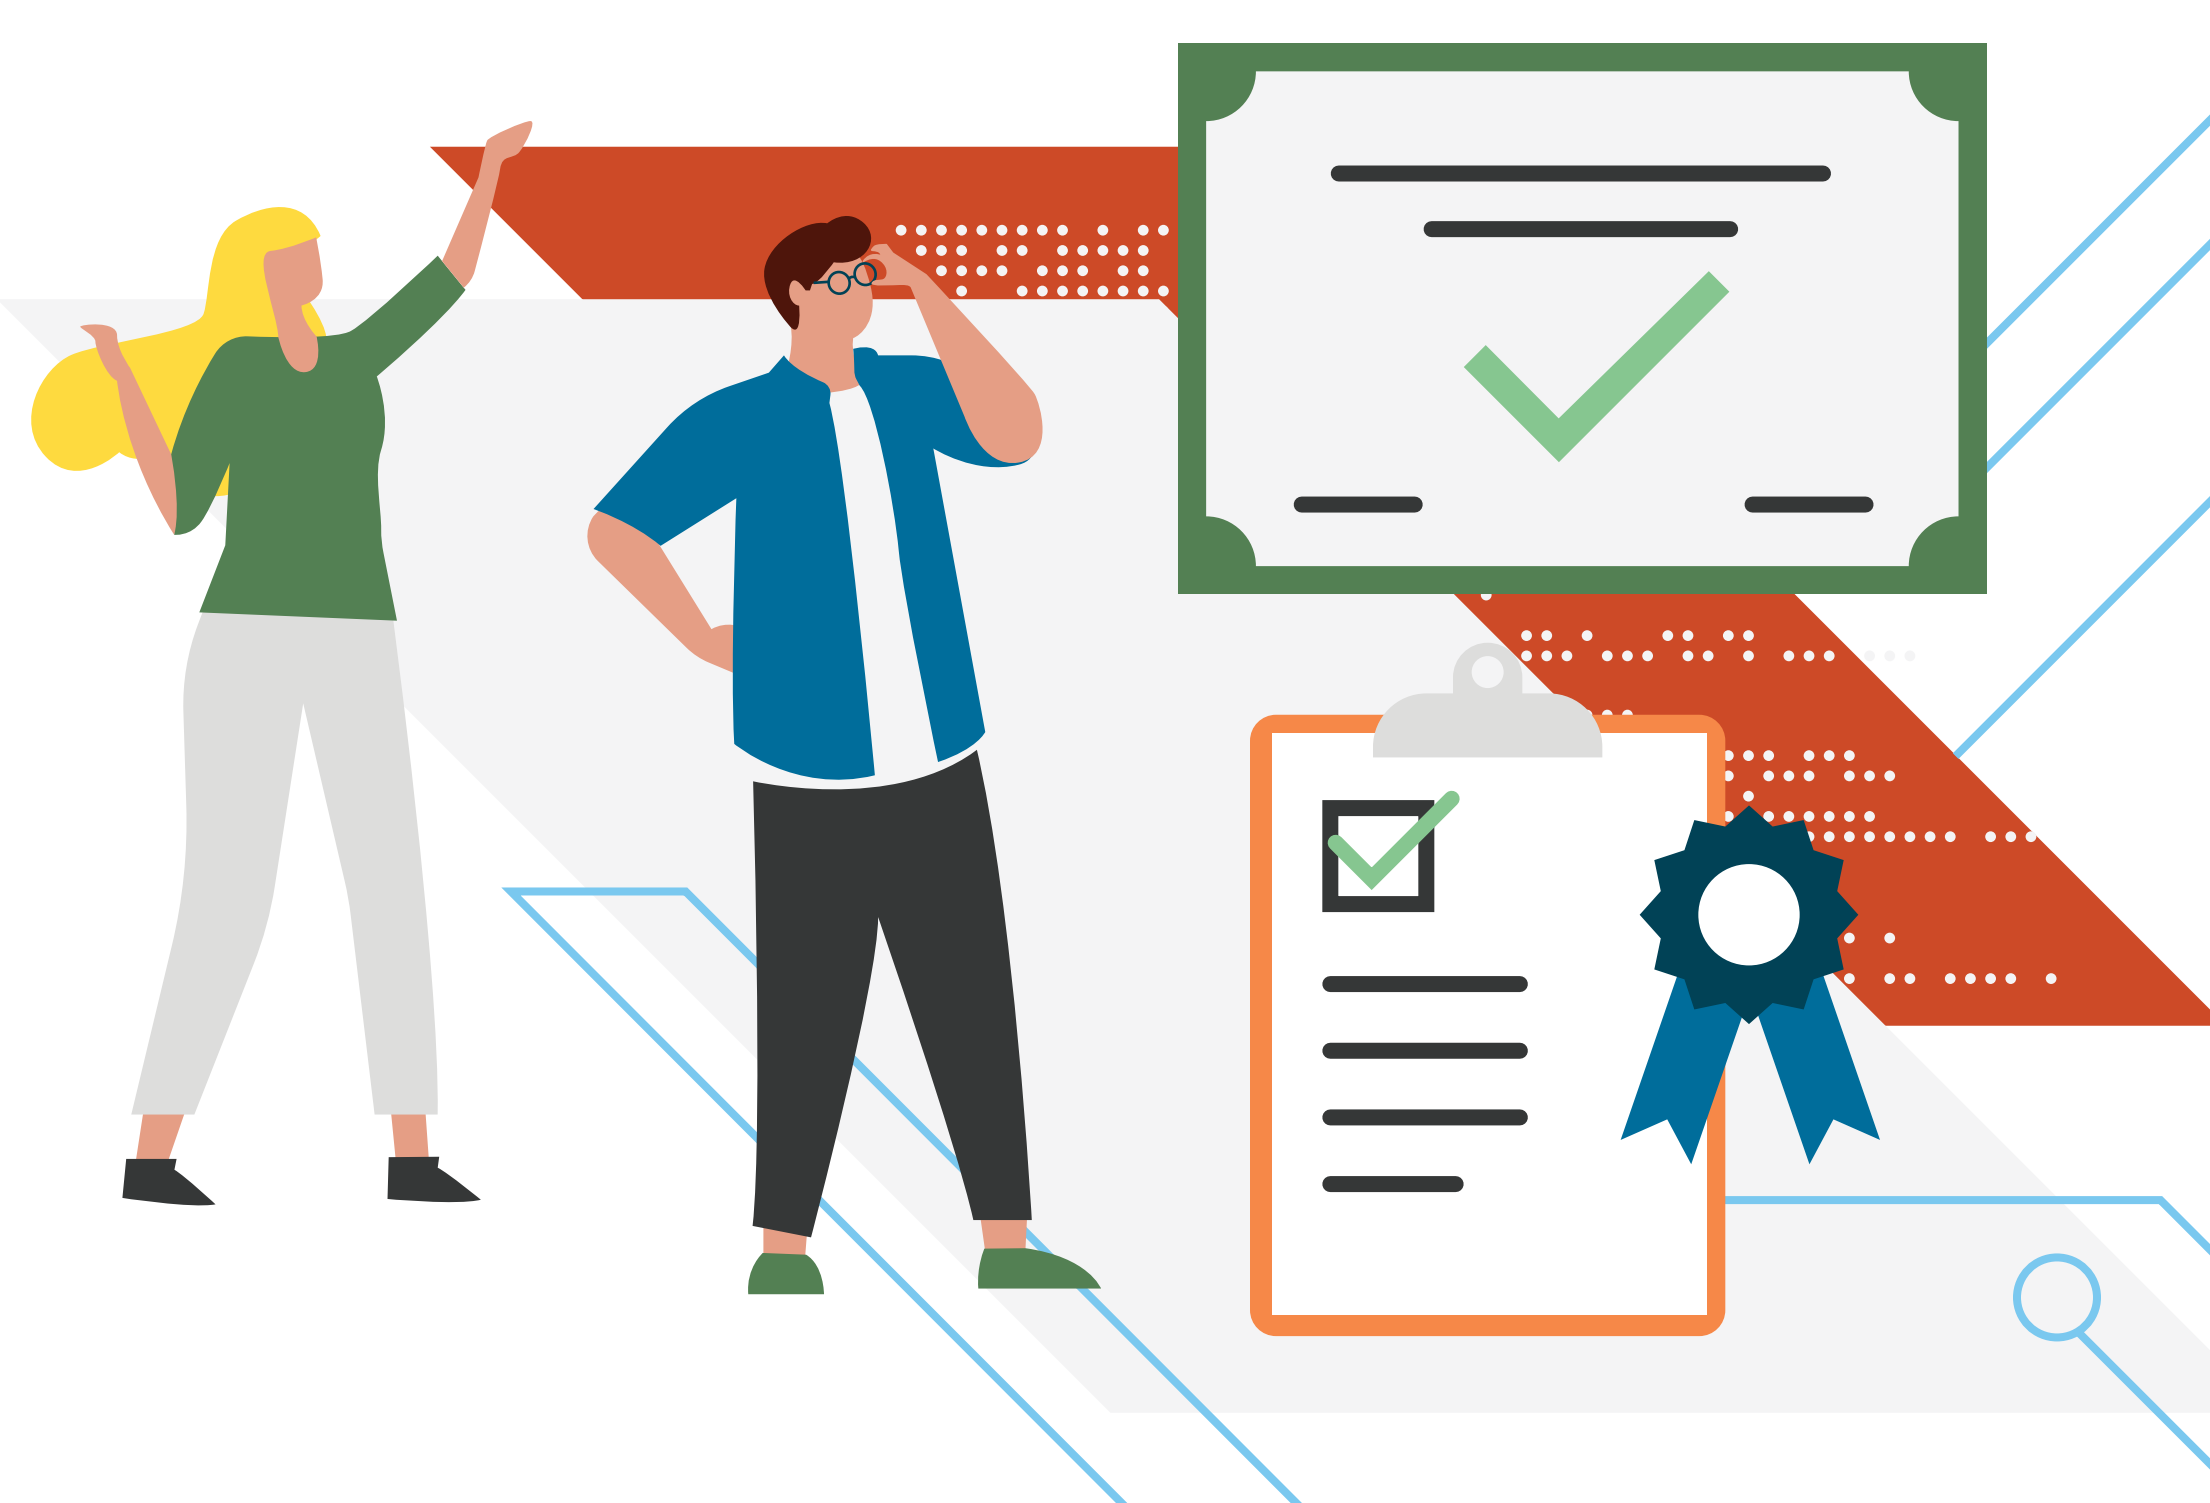

## Cost Decisions

With costs of labor and supplies growing, AI can accurately inform CFOs' decisions about how to effectively manage their workforces and operating margins.

## Clinical Decisions

AI can supply executives with clear, consistent, robust interpretations of data to assist them in making successful strategic decisions that support department-level efficiencies.

## Quality Improvement Decisions

Improving patient outcomes is a top priority for any health system. Quality leaders can leverage AI to gain insights into their quality measures, understand performance, and quickly make needed adjustments.

## Other Use Cases That Can Benefit

The list of decisions healthcare leaders can leverage augmented intelligence to inform accurate insights from is endless. From patient satisfaction to service-level performance like Mental Health and Behavioral Health, the health system can gain enterprise-wide insights with the help of AI.

## About Health Catalyst

Unlike other solutions, Health Catalyst is exclusively focused on healthcare that provides people, process, and technology solutions proven to transform raw data into measurable value.

We offer a data-informed solution that empowers healthcare organizations to instantly identify the most valuable opportunities for improvement across the care continuum, offering actionable guidance for success in risk-based contracts. We partner with our clients to explore opportunities within the complete clinical, operational, and financial context for a given population.
